EXPERIENCE

Associate Data & AI - Seeds Technical Services

July 2026 - present

- Independently designing a hyperlocal, multi-hazard resilience model (house-level granularity) fusing satellite imagery with socioeconomic data via vulnerability-impact-recovery sub-models.
- Built medallion-architecture ETL pipelines to ingest and preprocess satellite imagery for the resilience model.
- Engineered a production GIS dashboard for the Uttarakhand State Government; wrote conversion scripts to transform raw GIS data into PMTiles for serverless, download-protected tile delivery.

Software Developer Engineer Intern - OpenLM

Jan 2026 - May2026

- Built Playwright scraping workflows for JS-rendered sites, reducing plugin processing time by 67%.
- Implemented event-driven communication with Apache Kafka for scalable asynchronous processing.
- Designed backend services using Clean Architecture and CQRS principles to improve maintainability.
- Drove end-to-end test automation using AAA (unit + integration +service), raising Azure pipeline code coverage by 10%.

EDUCATION

Indian Institute of Engineering Science and Technology Shibpur

Nov 2022 - 2026

B.Tech, Computer Science and Technology

Overall GPA: 8.7/10

PROJECT

Production-Grade Agentic RAG System

[FastAPI, LangChain, LangGraph, LangSmith]

Github- https://github.com/a-nnurag/production_rag

- Built production-grade RAG and agent-based system for context-aware QA and multi-step reasoning.
- Orchestrated LLM agents via LangGraph for structured tool execution and reasoning flow.
- Built security layer with prompt injection detection, input sanitization, and PII protection.
- Wrote 37+ unit, integration, and service-level tests via TDD (pytest, AAA pattern).
- Integrated LangSmith for LLM chain tracing, debugging, and observability.

Multi-Tenant Travel Reimbursement SaaS

[FastAPI, PostgreSQL, Telegram Bot API, Azure]

Live Site- <https://ledgerai.shop/>

- Deployed multi-tenant backend on Azure with Postgres RLS for tenant-level isolation
- Built async processing backbone using outbox pattern for reliable at-least-once event delivery.
- Parsed receipt images via Gemini vision extraction and auto-populated structured Excel expense reports through Telegram bot, eliminating manual data entry.
- Implemented passwordless magic-link authentication for frictionless user login and onboarding.
- Instrumented platform with Prometheus, Grafana, and Loki for metrics and log monitoring

TECHNICAL SKILLS

Languages	C/C++, Python
Frameworks	.NET, Node.js, Express, FastAPI
AI & LLM	LangChain, LangGraph, LangSmith, RAG, Prompt Engineering, Vector Search/Embeddings ,OpenAI,Knowledge Graph,AI Agents Orchestration
Databases	MongoDB, PostgreSQL, VectorDB(Qdrant DB)
DevOps & Cloud	Docker, Azure, Git, GitHub, CI/CD, Apache Kafka
Testing & Tools	Playwright, xUnit, Claude Code , Grafana, Prometheus, Loki
Coding	LeetCode 1700+ rating

ACHIEVEMENTS

- Ranked **5th**, GeeksforGeeks Hackathon 2026, Kolkata
- Ranked **344th Worldwide**, HackerRank Orchestrate Hackathon (August 2026 Edition)
- Finalist**, MLH Hacktropica
- Led team to **1st Place**, Hult Prize Pitch Competition 2023
- Secured **2nd Place**, Robococon Hovercraft Competition, IEST Shibpur
- Represented institute at Kshitij AeroModelling Competition, IIT Kharagpur
